Subject: MS Settlement, Settle At Once

In the last 20 years there has been a giant thrust in the software industry. The number of software developers have increased with computers becoming available to everybody. Microsoft has a big role in realizing this dream.

Not only in the US, but all around the world software industry made job opportunities available to millions of people. A big number of small Businesses exploited computing machines more and more every day. Microsoft has a big part in this becoming true as well.

Now there is a case against Microsoft for being dominant in the market.

If Microsoft had not lowered prices and increased availability of software (along with its partners) the above points would not be true.

So, Our Belief is that Microsoft is not only a benefit for American people and Industry but to the other parts of the world as well. Please Support the settlement on the Microsoft case.

We appreciate your efforts in this matter.
